Authorised and notified according to Article 29 of the Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011

European Technical Assessment ETA-22/0613 of 2023/03/03

I General Part

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S	
Trade name of the construction product:	CELO cable and pipe fixings
Product family to which the above construction product belongs:	Power-actuated fastener for multiple use in concrete for non-structural applications
Manufacturer:	CELO FIJACIONES S.L. C/Rosselló, 7 08211 Castellar del Vallès (Barcelona) SPAIN Internet: www.celofixings.com
Manufacturing plant:	Plant 19
This European Technical Assessment contains:	21 pages including 17 annexes which form an integral part of the document
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:	EAD 330083-02-0601
This version replaces:	

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (except the confidential Annexes referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product

The CELO cable and pipe fixings consists of the power-actuated fastener (CELO nails XHA) made of zinc plated steel and the fixture according to Annex A1 made of zinc plated steel, polyamide or HDPE. The power-actuated fasteners are driven in the concrete by using a gas-actuated fastening tool (CELO FORCE ONE). They are anchored in the concrete by sintering and mechanical interlock.
The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this EAD is based lead to the assumption of a working life of the fastener of at least 50 years.

Technical Assessments are based on an assumed intended working life of the anchor of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Maximum service loads in non-cracked and cracked concrete	See Annex C1 to C6
Number of fixing points – n_1	$10 \leq n_1 \leq 100$
Uniform span between the fixing points	≤ 1m
Acceptable gaps (number of failure next to each other) for local failure	See Annex C1 to C6
Acceptable gaps (number of failure next to each other) for serviceability limit state	See Annex C1 to C6
Durability	Durability is ensured if the specifications of intended use according to Annex B are taken into account

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire of fasteners and fixtures made of metal	Class A1
Reaction to fire of fixtures made of polyamide or HDPE	No performance assessed
Resistance to fire	No performance assessed

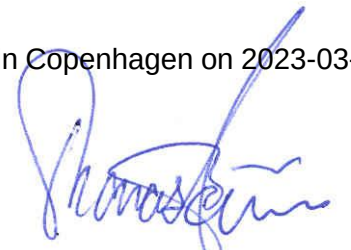
4 Assessment and verification of constancy of performance (AVCP)

In accordance with EAD 33083-02-0601, the applicable European legal act is: 1997/463/EC.
The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark prior to CE marking.

Issued in Copenhagen on 2023-03-03 by



Thomas Bruun
Managing Director, ETA-Danmark

Specification of intended use

Anchorages subject to

- Dead-loads of uniaxially spanned flexible or rigid cables and pipes.
- Static or quasi-static loading in reinforced or unreinforced concrete.
- Multiple fixing of non-structural application.

Base materials

- Strength classes C20/25 to C50/60 according to EN 206-1.
- Cracked and non-cracked concrete.

Use conditions

- Structures subject to dry internal conditions.
- Temperature range:
  Fixtures made of steel: between -40ºC to +80ºC,
  Fixtures made of plastic: maximum long-term temperature +24ºC, maximum short-term temperature +40ºC;
  for plastic fixtures made of polyamide minimum long-term temperature -20ºC and for plastic fixtures made of polyethylene minimum long-term temperature 0ºC.
- The fixtures made of PE cannot be exposed to UV-radiation for more than 6 weeks.

Design

- Conditions: Both ends of the chain are fixed supports (e.g. fixation in a cable-terminal box or where cables are led through interior rigid walls).
- Design: $F = g \cdot l \leq F_{s,max}$
  With:
  F = dead load of the cable or conduit acting on the fixture made of plastic or steel in N.
  g = dead load of the cable or conduit in N/m.
  l = spacing of the fasteners in m.
  $F_{s,max}$ = maximum service load (maximum possible loads) $N_{s,max}$ or $V_{s,max}$ in N according to Annex C1 to C6.

Notes:

- A potential influence of an eccentric load introduction into the power-actuated nail is taken into consideration in corresponding published loads shown in Annex C1 to C6.

- For fixtures made of plastic, the long-term effect due to creep is taken into consideration according to EN ISO 899-1.

- The loads given in Annexes C1 to C6 include the required safety against total failure of the global system according to EN 1990:2002 + A1:2005 + A1:2005/AC:2010 (Reliability class RC2, ultimate limit state, $\beta \geq 1.5$).

  The corresponding maximum service loads are valid for potential gaps due to single or maximum 3 fastener failures next to each other (see Annex C1 to C6). The fastener may be used if the cable sagging due to the given gaps have not bad appearance and the designer/user accepts these gaps.

CELO cable and pipe fixings	**Annex B1**
Intended use Specification of intended use	

- The loads given in Annexes C1 to C6 include the required safety against local failure according to EN 1990:2002 + A1:2005/AC:2010 (Reliability class RC1, ultimate limit state, $\beta \geq 3.3$).

  The corresponding maximum service loads are valid for potential gaps due to single or maximum 4 fastener failure next to each other (see Annex C1 to C6). The fastener may be used if the cable sagging due to the given gaps do not lead to a risk of use and the designer/user accepts these gaps.

Installation

- Fastener installation carried out by appropriately qualified personnel.
- Fastener installation in accordance with the manufacturer's specifications and drawings and using the specified installation device.
- Fasteners to be installed ensuring not less than the minimum effective anchorage depth of 11mm. If the embedment depth is smaller than the minimum effective anchorage depth the nail must be assumed as a setting defect.
- Use of setting tool according to Annex B5.

Table B1: Concrete and installation parameters

Power-actuated fastener		XHA22	XHA27	XHA32	XHA38
Minimum concrete strength class	[-]	C20/25			
Maximum concrete strength class	[-]	C50/60
